

To whom it may concern:

I am appalled by what the NAB is trying to do. It is none of their business if I choose to pay for my radio service using XM. Fact is they are scared they are losing customers on regular radio. The fact is that regular radio does not have the technology to carry the same radio station from coast to coast. I enjoy my XM radio and the service they provide. I am opposed to this petition and urge you, the FCC to oppose it also. I like being able to here traffic and weather at the touch of a button at any time, and being a truck driver this is great help to me and my safety as well as other's safety.
